

PROJECT REPORT

Premium Budget Planner - Financial Dashboard

1. Introduction

Managing personal finances is one of the most essential skills in today's world. Many people struggle to track their income, expenses, and savings goals effectively. Without proper tracking, it becomes difficult to understand spending patterns, save money, or plan for the future.

The Premium Budget Planner is a comprehensive web application designed to solve these problems. It provides users with a professional dashboard to:

- Track income and expenses in real-time
- Visualize spending patterns by category
- Set and monitor savings goals
- Export financial data for record-keeping
- Filter transactions by date, category, and type

The application features a premium dark theme with glassmorphism design, animated statistics, and a fully responsive layout that works seamlessly on desktop, tablet, and mobile devices. All data is stored locally in the browser using localStorage, ensuring privacy and offline accessibility.

2. Abstract

The Premium Budget Planner is a React-based personal finance management application that enables users to track their income, expenses, and savings goals through an intuitive dashboard interface.

Key Features Implemented:

Feature	Description
Transaction Management	Add, delete, and categorize income/expense entries
Real-time Analytics	Automatic calculation of totals, balances, and trends
Savings Goal Tracking	Set financial targets with visual progress indicators
Data Export/Import	Backup and restore data using CSV/JSON formats
Advanced Filtering	Search by keyword, category, date range, and transaction type
Dual View Modes	List view for transactions, Chart view for analytics
Category Breakdown	Visual representation of spending by category
Animated Statistics	Smooth number counters for better user experience

Technical Architecture:

- Frontend: React.js with Hooks (useState, useEffect, useCallback)
- Styling: Custom CSS with glassmorphism and dark theme
- Data Persistence: Browser localStorage API
- Data Export: CSV and JSON formats
- No Backend Required: Fully offline-capable application

Project Outcome:
A fully functional, production-ready personal finance dashboard that helps users make informed financial decisions through data visualization and tracking.

3. Tools & Technologies Used

Category	Technology	Version	Purpose
Framework	React.js	18.2.0	UI components & state management
Styling	Custom CSS	-	Glassmorphism, dark theme, responsive design
Icons	Emoji/Unicode	-	Visual enhancements
Data Storage	localStorage API	-	Client-side persistence
Data Export	FileSaver API	-	CSV/JSON export functionality
Development	Create React App	5.0.0	Project scaffolding
Code Editor	VS Code	-	Development environment
Version Control	Git	-	Source code management

Key Libraries Used:

- React Hooks (useState, useEffect, useCallback)
- Intl.NumberFormat (Currency formatting)
- Blob & FileReader APIs (Data import/export)
